Ozone Bacteria Killer is a natural product that kills 3000 times faster and is 300 times more powerful than Chlorine.

Feel safe knowing you are protected from harmful nasties

If you are looking for a natural, safe way to keep you and your loved ones protected from the germs, bacteria, viruses and other nasties that are all around you, Ozone Bacteria Killer is your solution.

Ozone Bacteria Killer is a natural product that kills 3000 times faster and is 300 times more powerful than Chlorine.

As Ozone reverts back to pure oxygen it does not leave behind any harmful chemical residues but only a nice clean smell that doesn't make you gag like chlorine and other chemicals can.

What is Ozone?

Ozone as it occurs in nature is the second most powerful sterilant in the world. Its function is to destroy bacteria, viruses and odours.

When the oxygen (O₂) that is all around us rises to the upper atmosphere and is exposed to the sun's ultraviolet rays, that oxygen is naturally turned into ozone (O₃).

This is the "ozone layer" that protects us from the sun's harmful UV rays.

Since ozone is heavier than air it falls back to earth. This is the ozone that naturally purifies our air and water. The fresh clean smell that we notice after a thunderstorm or near a water fall is a result of nature's creation of ozone – it cleans and deodorises the atmosphere. Without ozone nature could not purify our earth.

How does Ozone Bacteria Killer work?

Just like in nature, Ozone Bacteria Killer works by activating oxygen that oxidises and destroys all kinds of unpleasant and harmful components that occur in our daily lives.

Ozone Bacteria Killer is a truly green solution that is totally safe and environmentally friendly.

It works by converting Oxygen O₂ into Ozone O₃ which kills the germs, viruses, mould and other nasties that are in your environment. It then turns back into Oxygen O₂, making it totally safe to use.

Ozone. The Ultimate Bacteria Killer
